

Appln. No. 10/071,963  
Amendment dated September 26, 2003  
Reply to Office Action of July 2, 2003

Amendments to the Claims:

Please amend claims 1-6 and add new claims 11 and 12 as follows. The following listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

---

Claim 1 (Original). A decorative sheet which comprises:

a base material layer formed of a colored resin material including an amorphous polyethylene terephthalate type resin as a  
5 main component;

A 3  
a print pattern layer formed on one surface of said base material layer, consisting of a coloring ink comprising a binder including a copolymer of vinyl chloride and vinyl acetate as a  
main component; and

10 a transparent layer laminated on said print pattern layer, consisting of a resin material including a transparent amorphous polyethylene terephthalate type resin as a main component.

Appln. No. 10/071,963  
Amendment dated September 26, 2003  
Reply to Office Action of July 2, 2003

Claim 2 (Original). The decorative sheet according to Claim 1, further comprising a hard and transparent surface protective layer which is laminated on said transparent layer.

Claim 3 (Original). The decorative sheet according to Claim 2, wherein said surface protective layer is constituted of a transfer protective layer of a transfer foil.

3  
A  
C  
M  
Claim 4 (Original). The decorative sheet according to Claim 2, wherein said surface protective layer is constituted of a hard coating film.

Claim 5 (Original). The decorative sheet according to Claim 2, wherein said surface protective layer has a masking film which is spread on the surface of said surface protective layer.

Claim 6 (Original). The decorative sheet according to Claim 1, wherein said base material layer and said transparent layer comprise a ratio of 40 to 100% by weight of an amorphous polyethylene terephthalate type resin and 0 to 60% by weight of a crystalline polyester resin.

Reply to Office Action of July 2, 2003]

Claim 7 (Withdrawn). A method for producing a decorative sheet, comprising the steps of forming a pattern on one surface of a base material film formed of a colored resin raw material having an amorphous polyethylene terephthalate type resin as a main component, by using a coloring ink comprising a binder including a copolymer of vinyl chloride and vinyl acetate as a main component, thus forming a print pattern layer; supplying said base material film between a first pair of rolls which are generally horizontally provided in a parallel manner; supplying a transparent resin film obtained by extruding a transparent resin raw material including an amorphous polyethylene terephthalate type resin as a main component, between one roll of said first pair of rolls and the surface of the print pattern layer of said base material film supplied from another roll opposed to said roll, to laminate and spread the transparent resin film on the print pattern layer of said base material film, thus forming a base material sheet in which a transparent layer is formed on the print pattern layer of said base material film; supplying said base material sheet between a second pair of rolls; and supplying a surface protective film which is hard and transparent between one roll of said second pair of rolls and the surface of the transparent layer of said base material sheet supplied from

Amendment dated September 26, 2003  
Reply to Office Action of July 2, 2003

another roll opposed to said roll, thus laminating a surface protective layer.

Claim 8 (Withdrawn). A method for producing a decorative sheet, comprising the steps of forming a pattern on one surface of a base material film formed of a colored resin raw material having an amorphous polyethylene terephthalate type resin as a main component, by using a coloring ink comprising a binder including a copolymer of vinyl chloride and vinyl acetate as a main component, thus forming a print pattern layer; supplying said base material film between a first pair of rolls which are generally horizontally provided in a parallel manner; supplying a transparent resin film obtained by extruding a transparent resin raw material including an amorphous polyethylene terephthalate type resin as a main component, between one roll of said first pair of rolls and the surface of the print pattern layer of said base material film supplied from another roll opposed to said roll, to laminate and spread the transparent resin film on the print pattern layer of said base material film, thus forming a base material sheet in which a transparent layer is formed on the print pattern layer of said base material film; supplying said base material sheet between a second pair of rolls; supplying a transfer foil equipped with a surface protective film which is

hard and transparent between one roll of said second pair of  
rolls and the surface of the transparent layer of said base  
material sheet supplied from another roll opposed to said roll,  
thus transferring the transfer foil to the surface of the  
25 transparent layer of said base material sheet; and releasing a  
base material film of said transfer foil.

AB  
Cont'd

Claim 9 (Withdrawn). The method for producing a decorative  
sheet, according to Claim 7, wherein said base material film and  
said transparent resin film comprise a ratio of 40 to 100% by  
weight of an amorphous polyethylene terephthalate type resin and  
0 to 60% by weight of a crystalline polyester resin.

Claim 10 (Withdrawn). The method for producing a decorative  
sheet, according to Claim 8, wherein said base material film and  
said transparent resin film comprise a ratio of 40 to 100% by  
weight of an amorphous polyethylene terephthalate type resin and  
0 to 60% by weight of a crystalline polyester resin.

AY

Claim 11 (New). The decorative sheet according to claim 6,  
wherein said base material layer comprises a ratio of 60 to 90%  
by weight of an amorphous polyethylene terephthalate type resin

[Appln. No. 10/071.963  
Amendment dated September 26, 2003  
Reply to Office Action of July 2, 2003]

and a ratio of 10 to 40% by weight of a crystalline polyester resin.

AY  
cont

Claim 12 (New). . The decorative sheet according to claim 6, wherein said transparent layer comprises a ratio of 60 to 90% by weight of an amorphous polyethylene terephthalate type resin and a ratio of 10 to 40% by weight of a crystalline polyester resin.
